Dimensions of Elegance

In ComFrame's experience, five key dimensions are essential for achieving a true state of enterprise elegance:

- ✔ **Clarity of Vision** – the ability to see your entire business clearly, to make decisions and changes based on reliable, comprehensive intelligence and to accurately predict what the future will bring.
- ✔ **Fluid Operations** – achievement of smooth interoperability, information integration, business process management and total workforce collaboration.
- ✔ **Change Responsiveness** – agility to rapidly adjust to customer needs and market directions to quickly take advantage of new opportunities.
- ✔ **Future-Proof Infrastructure** – establishment of a modernized technology foundation, leveraging legacy assets, that enables change and eases compliance with market demands.
- ✔ **Results Acceleration** – agility to get from where you are today to where you need to be, from operational efficiency to customer responsiveness, quickly, cost-effectively and without disruption to the enterprise.

Elegance Inhibitors

Widespread business and IT-related “ailments” deter and block organizations from achieving true enterprise elegance. These inhibitors inflict operational pain and frustration, cause missed opportunities and loss of productivity as well as clog the information arteries your enterprise relies on to move forward at peak efficiency:

- ✔ **Business Cataracts** reduce clarity of leadership vision through the inability to produce an accurate, comprehensive and intuitive perspective of what is really going on across the enterprise.
- ✔ **Information Friction** inhibits fluid operations through inefficiencies that occur when the moving parts of a business – people, processes and information – experience resistance in attempting to work together.
- ✔ **Modernization Futility Disorder** is characterized by frustration with aging, inflexible technologies that block information access, inhibit customer responsiveness and diminish speed to market.
- ✔ **Agility Impairment** impedes progress toward business results, paralyzing a company's ability to easily transform as new opportunities arise and market conditions change.

Creating Enterprise Elegance Through ComFrame's Precision Innovation Delivery Framework

ComFrame diagnoses, targets and eliminates these nagging conditions through our **Precision Innovation Delivery Framework**, a multi-layered solution approach linking competencies, methods and technologies that break down the information barriers to achieving enterprise elegance. ComFrame delivers business and IT solutions through:

- ✓ Innovation Knowledge
- ✓ Innovation Manufacturing
- ✓ Innovation Protection

Innovation Knowledge

ComFrame consultants are equipped to address a wide range of information processing challenges, drawing on knowledge and experience across key practice domains that include:

- ✓ Custom Development
- ✓ Collaboration and Search
- ✓ Knowledge Management
- ✓ Business Intelligence
- ✓ Web Branding
- ✓ Usability Engineering
- ✓ Enterprise SOA

Recent ComFrame consulting projects encompass enterprise information strategy and execution, next-generation Web ecosystems, enterprise business intelligence, application lifecycle management, collaboration and knowledge management and implementation of Microsoft technologies that include MOSS, BizTalk, Enterprise Project Server, PerformancePoint Server, VSTS Team Foundation Server and SQL Server.

Innovation Manufacturing

Innovation Manufacturing takes place in ComFrame's **Precision Software Factory**. Business and IT professionals, collaborating across global office locations in Birmingham, Nashville and Beijing, accomplish custom software engineering using modern applications and tools to create high-end solutions for our clients.

ComFrame global software innovation projects leverage a wide variety of competencies and technologies, including .Net and Java/J2EE development to create Web services, service-oriented architectures (SOA) and elegant software applications.

ProtoSOA™ is ComFrame's dynamic SOA framework that provides a new approach for accomplishing enterprise integration and data transformation. Using the ProtoSOA infrastructure and tools, business and IT experts can create specific service components and then combine and reuse them to create elegant applications and support processes across the enterprise.

Innovation Protection

Innovation protection occurs through Praesideo, a proprietary "insurance policy" layer that wraps around and permeates all ComFrame activity. Praesideo provides advanced structure, processes, methodologies, best practices and other quality enhancement approaches that guide the client engagement arrow directly to the center of the expectations "bulls-eye."

Putting It All Together to Create Elegant Solutions

This unique delivery formula, combining Innovation Knowledge, Manufacturing and Protection elements together in the solution development process, is what sets ComFrame apart from other companies and enables us to deliver true enterprise elegance for our clients.

About ComFrame

Since 1997, ComFrame Software Corporation has delivered more than 300 elegant projects for clients in diverse industries across the southeastern United States, helping them reduce IT complexity and successfully deploy modern architectures and applications that improve business agility and efficiency. From offices in Birmingham, Alabama, Nashville, Tennessee, and Beijing, China, we deliver a broad range of custom solutions and packaged business applications. More than 130 architects, software engineers and project managers make up our highly skilled team. Expertise ranges from enterprise application development and integration to strategic business and brand management, usability and user experience engineering, business intelligence, information integration, business process and collaboration management, enterprise search, IT mentoring and training in new information technologies and service-oriented architectures (SOA).
